Degree Programmes and Educational Provision

Undergraduate/first cycle degree(s) offered at School/Department

USIT - Urbanistica e sistemi informativi territoriali

Number of years normally used to complete this degree(FT)

3

Part time option

Yes

Number years usually required for completing the degree part-time (PT)

6

Delivery mode

On campus

Number of ECTS

180

Teaching languages

Italian

Specialisation within in this Degree/the curriculum

no

The degree requires an assessed period of work in practice

Yes 3 months (250 hours)

Programme accreditation by a professional body/other institution

YES "Ordine degli architetti, pianificatori, paesaggisti e conservatori

Curriculum/approach description

The Degree aims at educating and to form professionals which are deeply engaged into the changes which are transforming cities and towns, regions and landscapes, so to become able to intervene with the conceptual and operational tools of planning.
There is a growing attention for the linkages with the economic, socio-political and administrative dimension of urban and territorial phenomena, which are part of the Bachelor courses. The course provides a specific competence on Information Systems, intended as fundamental tools for monitoring, control and govern the territorial changes, and particularly for the Public Administrations. Students are expected to learn to build a GIS, for the diverse and specific aims of planning, and to manage it.
Another focus is on developing a communicative capacity, which is considered as fundamental for answering to the needs of a progressively more complex and differentiated society.

(Post)Graduate/masters or second cycle degree(s) offered at School/department

Pianificazione della Città, del Territorio e dell'Ambiente

Number of years normally used to complete this degree(FT)

2

Part time option

Yes

Number years usually required for

4

completing the degree
Pianificazione della Città, del Territorio e dell'Ambiente
part-time (PI)

Delivery mode On campus

Number of ECTS 120

**Specialisation within
in this Degree/the
curriculum** no

The focus of the PhD Programme in Territorial and Urban Planning is the governance of urban and territorial development in its multiple characterising facets: the socio-economic development; the relevance of cultural heritage (assets and landscape); the functional, spatial and morphological aspects; the relationship with the environment, landscape and ecology; economic and financial issues and the social impacts of the interventions.

The line of interest includes theoretical, critical and practical topics. Scientific researches are oriented towards: the knowledge and the analysis of territorial and urban structures and their dynamic development; the techniques promoting, defining and regulating future developments through projects, programs, policies; the processes of governance.

The aim of the PhD Programme is to create high quality of critical and theoretical skill in addition to

Dottorato in Pianificazione Territoriale e Urbana - PhD in Town and Regional Planning	knowledge of operational profiles for the European community. Cultivation of multidisciplinary research abilities and competencies in interpreting and analysing the physical-functional
Curriculum/approach description	<p>transformational dynamics of cities, territories and the landscape is actively pursued. The programme intends to foster interdisciplinary competences in the using of project methods and evaluation criteria; in urban, regional, landscape and strategic planning techniques; legal institutes; administrative paths and incentives to promote efficient and quality transformation/conservation practices for the city and territory.</p> <p>Basically, the PhD Programme aims to offer an extensive research training directed towards the culture of territorial sustainable transformation (from an environmental, economical and social perspective), with an increasing awareness for the urban and territorial complex reality. Researchers should be able to critically gather all the multidimensional nexus of the territorial government processes. This training attempts to avoid the threats of excessive sectoral knowledge, conferring specific competences as well as the aptitude of updating them or outlining new ones in an open and international framework. The PhD Programme aspires to promote an advanced education that can be spent not only in the academic context, but also in public and private research institutes or in high-level professions both in the public and private sectors.</p>
